Origination: The Geographies of Brands and Branding
Andy Pike

Frontier Regions of Marketization: Agribusiness, Farmers, and the Precarious Making of Global Connections in West Africa
Stefan Ouma

Africa’s Information Revolution: Technical Regimes and Production Networks in South Africa and Tanzania
James T. Murphy and Padraig Carmody

In the Nature of Landscape: Cultural Geography on the Norfolk Broads
David Matless

Geopolitics and Expertise: Knowledge and Authority in European Diplomacy
Merje Kuus

Everyday Moral Economies: Food, Politics and Scale in Cuba
Marisa Wilson

Material Politics: Disputes Along the Pipeline
Andrew Barry

Fashioning Globalisation: New Zealand Design, Working Women and the Cultural Economy
Maureen Molloy and Wendy Larner

Working Lives – Gender, Migration and Employment in Britain, 1945–2007
Linda McDowell

Dunes: Dynamics, Morphology and Geological History
Andrew Warren

Spatial Politics: Essays for Dareen Massey
Edited by David Featherstone and Joe Painter

The Improvised State: Sovereignty, Performance and Agency in Dayton Bosnia
Alex Jeffrey

Learning the City: Knowledge and Translocal Assemblage
Colin McFarlane

Globalizing Responsibility: The Political Rationalities of Ethical Consumption
Clive Barnett, Paul Cloke, Nick Clarke & Alice Malpass

Domesticating Neo-Liberalism: Spaces of Economic Practice and Social Reproduction in Post-Socialist Cities
Alison Sinnott, Adrian Smith, Alena Rochovská and Dariusz Świętek

Swept Up Lives? Re-envisioning the Homeless City
Paul Cloke, Jon May and Sarah Johnsen

Aerial Life: Spaces, Mobilities, Affects
Peter Adey

Millionaire Migrants: Trans-Pacific Life Lines
David Ley

State, Science and the Skies: Governmentalities of the British Atmosphere
Mark Whitehead

Complex Locations: Women’s Geographical Work in the UK 1850–1970
Avril Maddrell

Value Chain Struggles: Institutions and Governance in the Plantation Districts of South India
JeffNeilson and Bill Pritchard

Queer Visibilities: Space, Identity and Interaction in Cape Town
Andrew Tucker

Arsenic Pollution: A Global Synthesis
Peter Ravenscroft, Hugh Bammer and Keith Richards

Resistance, Space and Political Identities: The Making of Counter-Global Networks
David Featherstone

Mental Health and Social Space: Towards Inclusionary Geographies?
Hester Parr

Climate and Society in Colonial Mexico: A Study in Vulnerability
Georgina H. Endfield

Geochemical Sediments and Landscapes
Edited by David J. Nash and Sue J. McLaren

Driving Spaces: A Cultural-Historical Geography of England’s M1 Motorway
Peter Merriman

Badlands of the Republic: Space, Politics and Urban Policy
Mustafa Dikeç

Geomorphology of Upland Peat: Erosion, Form and Landscape Change
Martin Evans and Jeff Warburton

Spaces of Colonialism: Delhi’s Urban Governmentalities
Stephen Legg

People/States/Territories
Rhys Jones

Publics and the City
Kurt Iveson

After the Three Italies: Wealth, Inequality and Industrial Change
Mick Dunford and Lidia Greco

Putting Workfare in Place
Peter Sunley, Ron Martin and Corinne Nativel

Domicile and Diaspora
Alison Blunt

Geographies and Moralities
Edited by Roger Lee and David M. Smith

Military Geographies
Rachel Woodward

A New Deal for Transport?
Edited by Iain Docherty and Jon Shaw

Geographies of British Modernity
Edited by David Gilbert, David Matless and Brian Short

Lost Geographies of Power
John Allen

Globalizing South China
Carolyn L. Cartier

Geomorphological Processes and Landscape Change: Britain in the Last 1000 Years
Edited by David L. Higgitt and E. Mark Lee

Forthcoming

Smoking Geographies: Space, Place and Tobacco
Ross Barnett, Graham Moon, Jamie Pearce, Lee Thompson and Liz Twigg

Home SOS: Gender, Injustice and Rights in Cambodia
Katherine Brickell

Nothing Personal? Geographies of Governing and Activism in the British Asylum System
Nick Gill

Pathological Lives: Disease, Space and Biopolitics
Steve Hinchliffe, Nick Bingham, John Allen and Simon Carter

Work-Life Advantage: Sustaining Regional Learning and Innovation
Al James

Rehearsing the State: The Political Practices of the Tibetan Government-in-Exile
Fiona McConnell

Articulations of Capital: Global Production Networks and Regional Transformations
John Pickles, Adrian Smith and Robert Beeg, with Milan Bućek, Rudolf Pastor and Poli Roukova

Body, Space and Affect
Steve Pile

Making Other Worlds: Agency and Interaction in Environmental Change
John Wainwright

Everyday Peace? Politics, Citizenship and Muslim Lives in India
Philippa Williams

Metropolitan Preoccupations: The Spatial Politics of Squatting in Berlin
Alexander Vasudev

Series Editors’ Preface

The RGS-IBG Book Series only publishes work of the highest international standing. Its emphasis is on distinctive new developments in human and physical geography, although it is also open to contributions from cognate disciplines whose interests overlap with those of geographers. The Series places strong emphasis on theoretically informed and empirically strong texts. Reflecting the vibrant and diverse theoretical and empirical agendas that characterize the contemporary discipline, contributions are expected to inform, challenge and stimulate the reader. Overall, the RGS-IBG Book Series seeks to promote scholarly publications that leave an intellectual mark and change the way readers think about particular issues, methods or theories.

For details on how to submit a proposal please visit: www.rgsbookseries.com

RGS-IBG Book Series Editors
While books are individually authored, they are collective efforts. Thanks are due to many people who have helped the production of this book: Neil Coe, Series Editor, for his advice, encouragement and perceptive feedback on the first draft; the book proposal reviewers; the book draft manuscript reviewers; Jacqueline Scott at Wiley-Blackwell; the participants in the research undertaken for the book; Charlie Thompson for the research assistance; the British Academy for funding the research on Burberry and the research assistance of Angela Abbott, Pedro Marques and Jon Swords; the Economic and Social Research Council (ESRC) for funding and the NewcastleGateshead Initiative and, specifically, Tina Snowball for supporting the ongoing research on space and place branding and reputation and the work of Rebecca Richardson and Fraser Bell; Michelle Wood for the cover art; the editors and reviewers for journals where the formative ideas have been published, especially Roger Lee and David Rigby; Stuart Dawley, Danny MacKinnon, Phil O’Neill and John Tomaney for their comments on draft chapters; the participants and contributors to the seminars and conference sessions in Aalborg, Beijing, Boston, Edinburgh, Glasgow, Lisbon, London, Manchester, Newcastle, Nottingham and Sheffield where the ideas have been introduced, explored and refined – especially John Allen, Nicola Bellini, Andy Cumber, Stuart Dawley, Andy Gillespie, Henrik Halkier, Ray Hudson, Alex Hughes, Guy Julier, Damian Maye, Kevin Morgan, Liz Moor, Cecilia Pasquinelli, Jane Pollard, Dominic Power, Ranald Richardson, Andrés Rodríguez-Pose and Henry Yeung; and colleagues at the Centre for Urban and Regional Development Studies (CURDS), Newcastle University, UK, which continues to provide a distinctive and stimulating research culture and outlook that has inspired and inflected this book. The insights and questions of the PhD and MA postgraduates in the local and regional development programmes in CURDS and undergraduates on the geography programmes at Newcastle University have further contributed to sharpening the understanding and communication of origination in brand and branding geographies. The usual disclaimers apply.

</table>
Introduction: Where are goods and services commodities from and why does it matter?

From the regional heyday of producing a quarter of the world’s ships in the opening decade of the twentieth century (Hudson 1989), Tyneside in north east England established a reputation for engineering innovation and manufacturing prowess. The ‘carboniferous capitalism’ of coal, iron and steel underpinned specialization and international technological leadership in heavy engineering in Britain’s imperial markets (Tomaney 2006). Industrial pioneers such as William Armstrong, Charles Parsons and George Stephenson in concert with skilled and unionized urban labour meant ‘Made in Tyneside’ was commercially meaningful and valuable (Middlebrook 1968). During the 1950s and 1960s, Historian Paul Kennedy described this time and place as:

A world of great noise and much dirt… [where] … There was a deep satisfaction about making things … among all of those that had supplied the services, whether it was the local bankers with credit; whether it was the local design firms. When a ship was launched at Swan Hunter [Wallsend, North Tyneside] all the kids at the local school went to see the thing our fathers had put together and when we looked down from the cross-wired fence, tried to find Uncle Mick, Uncle Jim or your dad, this notion of an integrated, productive community was quite astonishing (quoted in Chakrabortty 2011: 1).
Vessels, such as HMS York (Figure 1.1), were made in the shipyards of Hebburn, Walker and Wallsend, and, once departed from the slipway, travelled the world as functional commodities embodying the meaning and commercially valuable reputation of where they were from and who built them.

Although Tyneside has since been ravaged by waves of deindustrialization and a highly socially and spatially uneven transition to a service-dominated economy (Pike et al. 2006), the geographical associations in what a place is known for live on in certain specialist market niches. In the kinds of connections, for example, made in the corporate logo of Tyneside Safety Glass, including a silhouette of the Tyne Bridge, and the marking of some of its products with the slogan ‘Tyneside Toughened’. Tyneside Safety Glass is a privately owned specialist glass processor established in 1937 with its headquarters in the Team Valley south of the river Tyne in Gateshead. It employs around 200 people and operates three factories in north east England. The company articulates authentic claims to provenance as part of its creation and communication of meaning and value for its customers in international architectural, automotive, defence and security markets. There are no intrinsic ties that mean such goods and services commodities could not technically be produced
elsewhere beyond Tyneside in north east England. But commercial advantage is being sought by the owners through the company name, logo and slogan making strong and geographical connections to the historical traditions, character and reputation of the place of Tyneside for engineering ingenuity, technological innovation and manufacturing precision.

As Tyneside Safety Glass demonstrates, where goods and services commodities are from and are associated with – and, crucially, are perceived to be from and associated with – and why is important. Raising such issues encourages reflection upon how we understand and explain critical spatial concerns about the geographies of economy and their organization and dynamics: the call centres, design studios, factories, laboratories, logistics hubs, market stalls, offices, shops, trading floors, warehouses and the investments, jobs, incomes, livelihoods and identities in cities, localities, regions and countries with which they are entwined. Such concerns make us think about how, why, where and by whom goods and services commodities are associated with specific and particular geographical attributes and characteristics of spaces and places as part of attempts by myriad actors to create meaning and value.

Longstanding connections and connotations are evident especially where the geographical associations of goods and services commodities are strong, enduring and decisive commercial and trade advantages. Well known examples include ‘Danish furniture, Florentine leather goods, Parisian haute couture, Champagne wines, London theatre, Swiss watches before digitization, Thai silks, recorded music from Nashville … Hollywood films’ (Scott 1998: 109). The list could go on. For over four decades, researchers in the discipline of marketing have recognized this phenomenon and call it the ‘Country of Origin’ effect (Bass and Wilkie 1973). By this, they mean the consumer views of the different capabilities and historical reputations of countries for particular goods and services. These perceptions influence consumer assessments of attributes such as quality, style and taste, and interpretation of meaning and value that shapes their purchasing decisions (Phau and Prendergast 2000). Importantly, these geographical associations and reputations tend to be sticky, slow changing and, once accumulated, can become difficult to change or dislodge. As Harvey Molotch (2002: 677) puts it, ‘perfume should come from Paris not Peoria, watches from Geneva not Gdansk’. Such geographical associations are powerful in the ways in which they create – and potentially destroy – meaning and value through what they explicitly demonstrate or imply for specific goods and services commodities in particular spatial and temporal market contexts.

The origins of brands and branding

Historically, goods and later services commodities bore marks or brands as means of distinction from competitors and signs of quality and reliability (Room 1998). Artisanal producers in ancient Greece and Rome marked their goods such as pottery with distinctive signs to communicate their origin and quality (Lindemann 2010). Individual marks or seals that identified particular craft producers or traders were evident c.300 BC. Merchants initially used generic symbols to communicate the
business in which they traded, including ‘a ham for butchers, a cow for creameries’ (Chevalier and Mazzolovo 2004: 15). Makers’ marks began evolving into brands and became more evident and important during the seventeenth and eighteenth centuries. This development involved especially craft goods such as furniture, porcelain and tapestries, particularly when travelling for sale beyond face-to-face transactions in localized markets (Room 1998). As David Wengrow (2008: 21) argues, ‘commodity branding’:

has been a long-term feature of human cultural development, acting within multiple ideological and institutional contexts including those of sacred hierarchies and sacrificial economies of a certain scale. What has varied significantly over time and space is the nexus of authenticity, quality control, and desire from which brand economies draw their authority; the web of agencies (real or imagined) through which homogeneous goods must be seen to pass in order to be consumed, be they the bodies of the ancestral dead, the gods, heads of state, secular business gurus, media celebrities, or that core fetish of post-modernity, the body of the sovereign consumer citizen in the act of self-fashioning (emphasis in original).

Industrialization and mass production in the nineteenth century underpinned and reinforced the commercial value and meaning of branding, especially for packaged goods: ‘Through industrialization the production of many household items, such as soap, moved from local production to centralized factories. As the distance between buyer and supplier widened the communication of origin and quality became more important’ (Lindemann 2010: 3). The naming of ‘Platt’s Brand Raw Oysters’ and the explicit use of the term brand in the advertising of ‘Jackson Square Cigar – America’s Standard 5¢ Brand’ as particular kinds of commodities demonstrate the early and explicit incorporation of the term ‘brand’ into product names and their circulation and promotion (Figure 1.2). Mass production and distribution generated economies of scale and lowered production costs, but required mass markets and the communication and demonstration of superior quality to dislodge local consumer preferences for local producers.

The etymological roots of the word brand as a noun lie in several linguistic traditions. These refer commonly to a fire or flame as well as firebrand, piece of burning wood and torch: the Old English of brand and brond; the Old Norse brandr; the Old High German brant; the Old Frisian brond and the German brand (Collins Concise Dictionary Plus 1989). Historically, from around the 1550s, as a noun a brand was defined as an identifying mark to signify ownership burned on livestock as well as criminals and slaves with a branding iron. With the emergence of craft production and later industrialization, brand became defined as a type or kind of good or service from a specific company sold under a particular name, often referred to as its ‘brand name’ and encapsulating a particular design, identity and/or image. As a verb, from the 1400s, to brand meant to mark, to cauterize – often wounds – and to stigmatize typically criminals and slaves. From the 1580s, the meaning of the verb evolved to refer to the marking of property and ownership.
Branding emerged as a process that tries to articulate, integrate and enhance the attributes embodied and connected in brands in meaningful and valuable ways. Jan Lindemann (2010: 3) describes how:

Although the initial purpose of branding was to demonstrate the origin of an animal it quickly grew into a means of differentiation. Over time a farmer would establish a certain reputation for the quality of his cattle expressed by the branded mark on the animal. This enabled buyers quickly to assess the quality of the cattle and the price they were willing to pay for it.

Branding developed rapidly to become part of connecting meaning and value through associations across a wider range of goods and services. Branding has underpinned the process of brand extension by actors into certain spatial and temporal market settings. Examples include Italian fashion house Prada’s excursion into the mobile phone business with LG, and UK supermarket Tesco’s development of Tesco Bank financial services (Figure 1.3). In the era of industrialization and mass production and consumption, branding sat within Raymond Williams’ (1980: 184) broader definition of advertising as ‘a highly organized and professional system of magical inducements and satisfactions, functionally very similar to magical systems in simpler societies, but rather strangely co-existent with a highly developed scientific technology’.

Figure 1.2 ‘Platt’s Brand Raw Oysters’ and ‘Jackson Square Cigar – America’s Standard 5¢ Brand’. Source: Historical images from Baltimore Museum of Industry.
The rise of brands and branding

In the transition from a producer to a consumer-dominated economy, society, culture, ecology and polity (Bauman 2007), the brands and branding of goods and services commodities have risen to prominence in dramatic fashion. Brands and branding have proliferated. In the United Kingdom alone, the number of brands has risen from an estimated 2 million in 1997 to over 8 million in 2011 in a marketing context in which ‘80% of categories are seen as increasingly homogenous’; amidst the proliferation of media channels in the digital era consumers are being ‘bombarded with up to 5,000 marketing messages every day’ (Noble 2011: 29). Brands were traditionally treated in accounting as ‘goodwill’: the difference between the purchase price of a business and the book value of its assets (Lindemann 2010). Brands have now increased sufficiently in importance to become explicitly recognized as economic entities necessitating calculation of their financial value and incorporation into corporate accounts. As Jan Lindemann (2010: 5) explains:

In financial terms, the brand constitutes an intangible asset that provides its owners with an identifiable and ownable cash flow over the time of its useful economic life. This can span more than 100 years as evidenced by brands such Coca-Cola, Nokia, and Goldman Sachs. The brand is an economic asset that creates cash flows on a stand-alone basis (e.g. licensing) or integrated with other tangible and intangible assets. The mental impact of branding is only economically relevant if it results in a positive financial return.
for the user or owner of the brand that outstrips the investments into the brand. The impact of brands on shareholder value is substantial and can amount up to 80 per cent of shareholder value.

In acquisition, merger and takeover activities, the difference between the purchase price of the company and the value of its material or tangible assets has been attributed to the intangible asset of the brand (Lindemann 2010). Brands and branding have become critical sources of often enduring economic meaning and value, integral to shaping the agency of actors involved in corporate and industrial strategies internationally.

Amidst competition amongst consultancies offering proprietary methodologies, brands are now valued and ranked. Specific techniques such as Interbrand’s ‘Best Global Brand’, Millward Brown’s ‘Brand Dynamics/BrandZ’, Brand Finance’s ‘Brand Valuation’ and Young and Rubicam’s ‘BrandAsset Evaluator’ attribute different values to particular brands (Table 1.1) (Lindemann 2010). Derided as the ‘professional persuaders’ in Vance Packard’s (1980: 31) classic book, media holding companies providing assorted advertising, branding and media planning services are now amongst the world’s largest companies. Market leader the WPP group grossed over $14 billion in sales revenues in 2010 (Figure 1.4) (see Faulconbridge et al. 2011). As the media landscape has fragmented, splintered and proliferated across emergent technologies and multiple channels (e.g. billboard, on-line, print, radio, social media, TV), media planning companies working with brand owners and managers to place and position their brands have grown in importance, size and value (Kornberger 2010). While it is difficult accurately to count the complete volume and value of activity in the world of brands and branding, Liz Moor’s (2008: 413) analysis concludes that ‘branding is an increasingly significant component of the design

industry in Britain, while design itself is one of the largest sectors within the “creative industries”. Liz Moor (2008: 415, emphasis in original) further notes how ‘Part of what distinguishes branding from advertising is its extended spatial scope and broad conception of the potential media for commercial communication’ such that ‘corporate identity and branding consultancies had finally come close to realizing James Pilditch’s original aspiration of becoming not simply an adjunct of advertising, but rather “the new total”’.

The dramatic rise, pervasiveness and importance of brands and branding in contemporary economy, society, culture, ecology and polity has been widely recognized. Martin Kornberger (2010: xi) interprets the emergence of a ‘brand society’ wherein brands as ‘ready-made identities’ are ‘so mashed up with our social world that they have become a powerful life-shaping force’. He goes on to claim that brands may be ‘the most ubiquitous and pervasive cultural form in our society’ that are ‘rapidly becoming one of the most powerful of the phenomena transforming the way we manage organizations and live our lives’ (Kornberger 2010: xii, 23). Adam
Arvidsson (2005: 236) too interprets ‘a well nigh all-encompassing brand space’. Søren Askegaard (2006: 93) even argues that:

in the face of growing competition in global markets and rising costs and clutter in mass-media advertising, leading to demands for efficiency, integrated communication and a search for alternative communication vehicles, the presence and importance of brands has arguably never been greater globally.

For practitioners working in the world of brands and branding, ‘Brand is much more than a name or a logo. Brand is everything, and everything is brand’ (Pallota 2011: 1) and ‘there is no such thing as a world without brands’ (Chevalier and Mazzolovo 2004: 3). Brand gurus, such as Wally Olins (2003: 7), see ‘that what marketing, branding and all the rest of it are about is persuading, seducing and attempting to manipulate people into buying products and services. In companies that seduce, the brand is the focus of corporate life. Branding is everything.’ For Naomi Klein (2000: 196) in her influential and popular political-economic critique, No Logo, brand consultancies have become the new ‘brand factories, hammering out what is of true value: the idea, the lifestyle, the attitude. Brand builders are the new primary producers in our so-called knowledge economy.’ In academic social-scientific accounts, brands are now seen to constitute ‘a central feature of contemporary economic life’ (Lury 2004: 27), branding is a ‘core activity of capitalism’ (Holt 2006a: 300), and their prevalence and importance in shaping the organization and dynamics of the economy in space and time signals ‘a major change in the character of contemporary accumulation’ (Hudson 2005: 68). Given such claims and views of the role and importance of brands and branding in economy, society, culture, polity and ecology, critical study of their geographies is overdue.

The missing geographies of brands and branding

Despite their dramatic rise, pervasiveness and importance, the ways in which the geographies of space and place are inescapably intertwined with brands and branding have been unevenly recognized and under-investigated. There are at least several reasons for this relative neglect. First, the field of brands and branding is longstanding but recently fashionable and increasingly crowded in the academic, practitioner and popular literatures. Despite differences in meaning and usage, a simple count of articles with ‘brand’ and/or ‘branding’ in their title published between 1969 and 2009 demonstrates the dramatic growth in academic research since the late 1990s (Figure 1.5). This research effort has proceeded across numerous disciplines including architecture (e.g. Klingman 2007), business studies (e.g. Buzzell et al. 1994), economics (e.g. Casson 1994), economic history (e.g. da Silva Lopes and Duguid 2010), geography (e.g. Pike 2011b), international relations (e.g. Anholt 2006), marketing (e.g. de Chernatony 2010; Holt 2006a), communication and media studies (e.g. Aronczyk and Powers 2010; Aronczyk 2013), planning (e.g. Ashworth and Voogd 1990), political science
