Contents

List of Contributors *XXIII*

Preface *XXXIII*

Part I Introduction *1*

- 1 Bioenergy from Dendromass for the Sustainable Development of Rural Areas: Research Findings from the AgroForNet and BEST Projects of the German ‘Sustainable Land Management’ Funding Programme** *3*
David Butler Manning, Albrecht Bemmman, Christian Ammer, Michael Bredemeier and Norbert Lamersdorf
- 1.1 The ‘Sustainable Land Management’ Funding Programme *3*
- 1.1.1 Land Management *4*
- 1.1.2 Transdisciplinarity *4*
- 1.1.3 Regional Aspect *4*
- 1.2 Module B: ‘Innovative System Solutions for Sustainable Land Management’ *5*
- 1.3 Dendromass Production and Rural Development in the Context of Sustainable Land Management *6*
- 1.4 Added Value of this Joint Book Publication *7*
- References *8*
- 2 Linking the Producers and Consumers of Woodfuel to Contribute to the Sustainable Development of Rural Areas: An Introduction to AgroForNet** *9*
David Butler Manning and Albrecht Bemmman
- 2.1 Background and Motivation *9*
- 2.2 Aims and Structure of the Project *10*
- 2.3 Research Results Contributed to this Book *11*
- References *13*

3	Strengthening Bioenergy Regions: An Introduction to BEST 15
	<i>Christian Ammer, Michael Bredemeier and Norbert Lamersdorf</i>
3.1	Background and Motivation 15
3.2	Aims and Structure of the Project 16
3.3	Research Results Contributed to this Book 17
	References 20
	Part II Environmental Constraints, Landscape Functions and Ecosystem Services 21
4	The Bioenergy Allocation and Scenario Tool (BEAST) to Assess Options for the Siting of Short Rotation Coppice in Agricultural Landscapes: Tool Development and Case Study Results from the Göttingen District* 23
	<i>Gerald Busch and Jan C. Thiele</i>
4.1	Introduction 23
4.2	Study Area and Methods 24
4.2.1	Study Area 24
4.2.2	Field Geometries, Administrative Units and Ecological Units as Spatial Reference 24
4.2.3	The BEAST Assessment Approach 25
4.2.4	Spatial Selection and Multi-Criteria Evaluation Procedure 25
4.2.4.1	Step 1: Setting the Objectives 26
4.2.4.2	Step 2: Defining Restricted and Preference Areas 28
4.2.4.3	Step 3: Scaling the Evaluation Criteria 28
4.2.4.4	Step 4: Weighting the Evaluation Criteria and Executing the MCE Calculation 28
4.2.5	Production Criteria 29
4.2.5.1	Crop Yield Modelling 29
4.2.5.2	Short Rotation Coppice Yield Modelling 31
4.2.5.3	Application in the Göttingen District 32
4.2.5.4	Production Criteria Setting for the Case Study 32
4.2.6	Economic Criteria 33
4.2.6.1	Cost Calculation 33
4.2.6.2	Price Calculation 35
4.2.6.3	Economic Criteria Setting for the Case Study 35
4.3	Results 35
4.3.1	Identification of Economically Competitive Short Rotation Coppice Sites 35
4.3.2	Shift in Yield Levels Due to Site Selection 37
4.3.3	Erosion Protection as Ecological Synergy 38
4.4	Discussion and Conclusions 40
	References 41

5	The Influence of More Widespread Cultivation of Short Rotation Coppice on the Water Balance: From the Site to the Regional Scale*	45
	<i>Andreas Wahren, Falk Richter, Stefan Julich, Martin Jansen and Karl-Heinz Feger</i>	
5.1	Introduction	45
5.2	Evidence from Field Measurements and Results of the Plot-Level Modelling	47
5.2.1	Research Plots and Model Concept	47
5.2.2	Results at Plot Level	48
5.3	Regional-Scale Modelling	50
5.3.1	SWAT Model	51
5.3.2	Incorporation of Short Rotation Coppice in SWAT	52
5.3.3	Scenarios	53
5.3.4	Results at the Regional Scale	54
5.3.5	Discussion of the Influence at the Regional Scale	56
5.4	Conclusions	57
	References	59
6	Short Rotation Coppice as Habitat for Vascular Plants*	63
	<i>Charlotte Seifert, Christoph Leuschner and Heike Culmsee</i>	
6.1	Introduction	63
6.2	Methods	64
6.2.1	Study Sites	64
6.2.2	Vegetation Sampling and Analysis	65
6.2.3	Soil Sampling and Analysis	66
6.2.4	Measurements of Photosynthetically Active Radiation Transmission	66
6.3	Results and Discussion	67
6.3.1	Habitat Conditions and Plant Diversity in Newly Established Short Rotation Coppice	67
6.3.2	Habitat Conditions and Plant Diversity in Older Short Rotation Coppice	70
6.3.3	Implications for Plant Species Conservation	72
6.3.4	Management Recommendations for the Enhancement of Plant Diversity	73
6.4	Conclusions	75
	References	76
7	Synergies and Conflicts between an Increasingly Widespread Cultivation of Short Rotation Coppice and Nature Conservation at the Landscape Level*	79

8.1	Siting of Short Rotation Coppice	97
8.2	Measures for the Enhancement of the Nature Conservation Value of Short Rotation Coppice	98
8.2.1	Nature Conservation Measures at Establishment	99
8.2.2	Nature Conservation Measures during Short Rotation Coppice Management	102
8.3	Conclusions	102
	References	102
9	The Effects of Short Rotation Coppice on the Visual Landscape*	105
	<i>Thiemen Boll, Christina von Haaren and Michael Rode</i>	
9.1	Introduction	105
9.2	Research Design and Methods	106
9.2.1	Model Landscapes and General Design of Visualisations	106
9.2.2	Visualisations of Different Scenarios for Landscape Types from the Bird's-Eye Perspective	107
9.2.3	Visualisations of Different Edge Designs from the Pedestrian Perspective	109
9.2.4	Online Survey	109
9.2.5	Statistical Analysis and Sample Characteristics	111
9.3	Results	111

- 9.3.1 Evaluation of Short Rotation Coppice Cultivation Scenarios Among Landscape Types 111
- 9.3.2 Evaluation of Short Rotation Coppice Cultivation Scenarios within Landscape Types 113
- 9.3.3 Evaluation of the Edge Design of Short Rotation Coppice 114
- 9.4 Discussion 115
- 9.4.1 Influence of Different Landscape Types and Cultivation Scenarios 115
- 9.4.2 Edge Design of Short Rotation Coppice 117
- 9.5 Conclusions 118
- References 118

Part III Evaluating, Managing and Enhancing the Supply of Dendromass 121

- 10 Site Conditions, Initial Growth and Nutrient and Litter Cycling of Newly Installed Short Rotation Coppice and Agroforestry Systems* 123**
Linda Hartmann and Norbert Lamersdorf
- 10.1 Short Rotation Coppice and Agroforestry Systems as Resource-Efficient Cropping Systems 123
- 10.2 Study Region and Research Site Description 125
- 10.2.1 Reiffenhausen 125
- 10.2.2 Friedland 126
- 10.2.3 BERTA 127
- 10.3 Physical and Chemical Properties of the Soils 127
- 10.4 Planting Success, Initial Biomass and Litter Production and Nutrient Release 128
- 10.5 Nitrogen Budget and N Use Efficiency 132
- 10.6 Discussion and Conclusions 134
- References 135

- 11 Potential Offered by a Willow–Grassland Alley Cropping System as a Biogenic Source of Energy* 139**
Miriam Ehret, Rüdiger Graß and Michael Wachendorf
- 11.1 Introduction 139
- 11.2 Materials and Methods 140
- 11.3 Results 142
- 11.4 Discussion and Conclusions 144
- References 145

- 12 The Effects of Irrigation on the Growth of Poplars and Willows Cultivated in Short Rotation* 147**
Konrad Lorenz and Jürgen Müller
- 12.1 Introduction 147
- 12.2 Materials and Methods 147

12.2.1	Research Area	147
12.2.2	Data Collection and Instrumentation Employed in the Experimental Areas	148
12.2.3	Irrigation Procedure	151
12.3	Results	151
12.3.1	Irrigation	151
12.3.2	Leaf Biomass	153
12.3.3	Tree Growth	154
12.4	Discussion	157
12.5	Conclusions	158
	References	158
13	A Spatially Explicit Approach to the Identification of Sites Suitable for Woody Biomass Systems Based on Site Factors and Field Geometry: A Case Study for the Göttingen District*	161
