FIXED INCOME ANALYSIS
CFA Institute is the premier association for investment professionals around the world, with more than 150,000 CFA charterholders worldwide in 165+ countries and regions. Since 1963 the organization has developed and administered the renowned Chartered Financial Analyst® Program. With a rich history of leading the investment profession, CFA Institute has set the highest standards in ethics, education, and professional excellence within the global investment community and is the foremost authority on investment profession conduct and practice. Each book in the CFA Institute Investment Series is geared toward industry practitioners along with graduate-level finance students and covers the most important topics in the industry. The authors of these cutting-edge books are themselves industry professionals and academics and bring their wealth of knowledge and expertise to this series.

About the CFA Institute Series xix

PART I
Fixed Income Essentials

CHAPTER 1
Fixed-Income Securities: Defining Elements 3

1. Introduction 3

2. Overview of a Fixed-Income Security 4
   2.1. Basic Features of a Bond 5
   2.2. Yield Measures 10

3. Legal, Regulatory, and Tax Considerations 10
   3.1. Bond Indenture 10
   3.2. Legal and Regulatory Considerations 18
   3.3. Tax Considerations 21

4. Structure of a Bond’s Cash Flows 23
   4.1. Principal Repayment Structures 23
   4.2. Coupon Payment Structures 28

5. Bonds with Contingency Provisions 34
   5.1. Callable Bonds 34
   5.2. Putable Bonds 36
   5.3. Convertible Bonds 37

6. Summary 40
   Practice Problems 42
CHAPTER 2
Fixed-Income Markets: Issuance, Trading, and Funding

Learning Outcomes
1. Introduction
2. Overview of Global Fixed-Income Markets
   2.1. Classification of Fixed-Income Markets
   2.2. Fixed-Income Indexes
   2.3. Investors in Fixed-Income Securities
3. Primary and Secondary Bond Markets
   3.1. Primary Bond Markets
   3.2. Secondary Bond Markets
4. Sovereign Bonds
   4.1. Characteristics of Sovereign Bonds
   4.2. Credit Quality of Sovereign Bonds
   4.3. Types of Sovereign Bonds
   5.1. Non-Sovereign Bonds
   5.2. Quasi-Government Bonds
   5.3. Supranational Bonds
6. Corporate Debt
   6.1. Bank Loans and Syndicated Loans
   6.2. Commercial Paper
   6.3. Corporate Notes and Bonds
7. Structured Financial Instruments
   7.1. Capital Protected Instruments
   7.2. Yield Enhancement Instruments
   7.3. Participation Instruments
   7.4. Leveraged Instruments
8. Short-Term Funding Alternatives Available to Banks
   8.1. Retail Deposits
   8.2. Short-Term Wholesale Funds
   8.3. Repurchase and Reverse Repurchase Agreements
9. Summary
   Practice Problems

CHAPTER 3
Introduction to Fixed-Income Valuation

Learning Outcomes
1. Introduction
2. Bond Prices and the Time Value of Money
   2.1. Bond Pricing with a Market Discount Rate
   2.2. Yield-to-Maturity
   2.3. Relationships between the Bond Price and Bond Characteristics
   2.4. Pricing Bonds with Spot Rates
### Contents

3. Prices and Yields: Conventions for Quotes and Calculations 107
   3.1. Flat Price, Accrued Interest, and the Full Price 107
   3.2. Matrix Pricing 111
   3.3. Annual Yields for Varying Compounding Periods in the Year 114
   3.4. Yield Measures for Fixed-Rate Bonds 118
   3.5. Yield Measures for Floating-Rate Notes 121
   3.6. Yield Measures for Money Market Instruments 125
4. The Maturity Structure of Interest Rates 130
5. Yield Spreads 138
   5.1. Yield Spreads over Benchmark Rates 138
   5.2. Yield Spreads over the Benchmark Yield Curve 140
6. Summary 143
   Practice Problems 145

### CHAPTER 4

**Introduction to Asset-Backed Securities** 153

CHAPTER 5
Understanding Fixed Income Risk and Return

Learning Outcomes
1. Introduction 204
2. Sources of Return 204
3. Interest Rate Risk on Fixed-Rate Bonds
   3.1. Macaulay, Modified, and Approximate Duration 212
   3.2. Effective Duration 220
   3.3. Key Rate Duration 224
   3.4. Properties of Bond Duration 224
   3.5. Duration of a Bond Portfolio 230
   3.6. Money Duration of a Bond and the Price Value of a Basis Point 233
   3.7. Bond Convexity 235
4. Interest Rate Risk and the Investment Horizon
   4.1. Yield Volatility 245
   4.2. Investment Horizon, Macaulay Duration, and Interest Rate Risk 247
5. Credit and Liquidity Risk 251
6. Summary 252
Practice Problems 255

CHAPTER 6
Fundamentals of Credit Analysis

Learning Outcomes
1. Introduction 261
2. Credit Risk 262
3. Capital Structure, Seniority Ranking, and Recovery Rates 264
   3.1. Capital Structure 264
   3.2. Seniority Ranking 265
   3.3. Recovery Rates 267
4. Rating Agencies, Credit Ratings, and Their Role in the Debt Markets 270
   4.1. Credit Ratings 271
   4.2. Issuer vs. Issue Ratings 273
   4.3. Risks in Relying on Agency Ratings 274
5. Traditional Credit Analysis: Corporate Debt Securities 279
   5.1. Credit Analysis vs. Equity Analysis: Similarities and Differences 280
   5.2. The Four Cs of Credit Analysis: A Useful Framework 280
6. Credit Risk vs. Return: Yields and Spreads 298
7. Special Considerations of High-Yield, Sovereign, and Non-Sovereign Credit Analysis
   7.1. High Yield 307
   7.2. Sovereign Debt 315
   7.3. Non-Sovereign Government Debt 319
8. Summary 321
Practice Problems 324
PART II
Fixed Income Term Structure, Advanced Valuation and Credit Analysis

CHAPTER 7
The Term Structure and Interest Rate Dynamics 335

Learning Outcomes 335
1. Introduction 336
2. Spot Rates and Forward Rates 336
   2.1. The Forward Rate Model 338
   2.2. Yield to Maturity in Relation to Spot Rates and Expected
       and Realized Returns on Bonds 346
   2.3. Yield Curve Movement and the Forward Curve 349
   2.4. Active Bond Portfolio Management 351
3. The Swap Rate Curve 355
   3.1. The Swap Rate Curve 355
   3.2. Why Do Market Participants Use Swap Rates When Valuing Bonds? 356
   3.3. How Do Market Participants Use the Swap Curve in Valuation? 357
   3.4. The Swap Spread 360
   3.5. Spreads as a Price Quotation Convention 362
4. Traditional Theories of the Term Structure of Interest Rates 364
   4.1. Local Expectations Theory 364
   4.2. Liquidity Preference Theory 365
   4.3. Segmented Markets Theory 366
   4.4. Preferred Habitat Theory 366
5. Modern Term Structure Models 369
   5.1. Equilibrium Term Structure Models 369
   5.2. Arbitrage-Free Models: The Ho–Lee Model 374
6. Yield Curve Factor Models 377
   6.1. A Bond's Exposure to Yield Curve Movement 377
   6.2. Factors Affecting the Shape of the Yield Curve 378
   6.3. The Maturity Structure of Yield Curve Volatilities 382
   6.4. Managing Yield Curve Risks 383
7. Summary 386
   References 387
   Practice Problems 387

CHAPTER 8
The Arbitrage-Free Valuation Framework 397

Learning Outcomes 397
1. Introduction 397
2. The Meaning of Arbitrage-Free Valuation 398
   2.1. The Law of One Price 399
   2.2. Arbitrage Opportunity 399
   2.3. Implications of Arbitrage-Free Valuation for Fixed-Income Securities 400
3. Interest Rate Trees and Arbitrage-Free Valuation
   3.1. The Binomial Interest Rate Tree
   3.2. What Is Volatility and How Is It Estimated?
   3.3. Determining the Value of a Bond at a Node
   3.4. Constructing the Binomial Interest Rate Tree
   3.5. Valuing an Option-Free Bond with the Tree
   3.6. Pathwise Valuation
4. Monte Carlo Method
5. Summary
   Practice Problems

CHAPTER 9
Valuation and Analysis of Bonds with Embedded Options

Learning Outcomes
1. Introduction
2. Overview of Embedded Options
   2.1. Simple Embedded Options
   2.2. Complex Embedded Options
3. Valuation and Analysis of Callable and Putable Bonds
   3.1. Relationships between the Values of a Callable or Putable Bond,
       Straight Bond, and Embedded Option
   3.2. Valuation of Default-Free and Option-Free Bonds: A Refresher
   3.3. Valuation of Default-Free Callable and Putable Bonds in the
       Absence of Interest Rate Volatility
   3.4. Effect of Interest Rate Volatility on the Value of Callable and
       Putable Bonds
   3.5. Valuation of Default-Free Callable and Putable Bonds in the
       Presence of Interest Rate Volatility
   3.6. Valuation of Risky Callable and Putable Bonds
4. Interest Rate Risk of Bonds with Embedded Options
   4.1. Duration
   4.2. Effective Convexity
5. Valuation and Analysis of Capped and Floored Floating-Rate Bonds
   5.1. Valuation of a Capped Floater
   5.2. Valuation of a Floored Floater
6. Valuation and Analysis of Convertible Bonds
   6.1. Defining Features of a Convertible Bond
   6.2. Analysis of a Convertible Bond
   6.3. Valuation of a Convertible Bond
       Bond, the Straight Bond, and the Underlying Common Stock
7. Bond Analytics
8. Summary
CHAPTER 10
Credit Analysis Models

Learning Outcomes
1. Introduction
2. Modeling Credit Risk and the Credit Valuation Adjustment
3. Credit Scores and Credit Ratings
4. Structural and Reduced-Form Credit Models
5. Valuing Risky Bonds in an Arbitrage-Free Framework
6. Interpreting Changes in Credit Spreads
7. The Term Structure of Credit Spreads
8. Credit Analysis for Securitized Debt
9. Summary
References
Practice Problems

CHAPTER 11
Credit Default Swaps

Learning Outcomes
1. Introduction
2. Basic Definitions and Concepts
   2.1. Types of CDS
   2.2. Important Features of CDS Markets and Instruments
   2.3. Credit and Succession Events
   2.4. Settlement Protocols
   2.5. CDS Index Products
   2.6. Market Characteristics
3. Basics of Valuation and Pricing
   3.1. Basic Pricing Concepts
   3.2. The Credit Curve
   3.3. CDS Pricing Conventions
   3.4. Valuation Changes in CDS during Their Lives
   3.5. Monetizing Gains and Losses
4. Applications of CDS
   4.1. Managing Credit Exposures
   4.2. Valuation Differences and Basis Trading
5. Summary
Practice Problems

PART III
Fixed Income Portfolio Management
CHAPTER 12
Overview of Fixed-Income Portfolio Management 605

Learning Outcomes 605
1. Introduction 605
2. Roles of Fixed-Income Securities in Portfolios 606
   2.1. Diversification Benefits 606
   2.2. Benefits of Regular Cash Flows 608
   2.3. Inflation Hedging Potential 609
3. Fixed-Income Mandates 611
   3.1. Liability-Based Mandates 611
   3.2. Total Return Mandates 615
4. Bond Market Liquidity 619
   4.1. Liquidity among Bond Market Sub-Sectors 620
   4.2. The Effects of Liquidity on Fixed-Income Portfolio Management 621
5. A Model for Fixed-Income Returns 622
   5.1. Decomposing Expected Returns 623
   5.2. Estimation of the Inputs 626
   5.3. Limitations of the Expected Return Decomposition 627
6. Leverage 628
   6.1. Using Leverage 628
   6.2. Methods for Leveraging Fixed-Income Portfolios 629
   6.3. Risks of Leverage 632
7. Fixed-Income Portfolio Taxation 632
   7.1. Principles of Fixed-Income Taxation 633
   7.2. Investment Vehicles and Taxes 634
8. Summary 636
   References 637
   Practice Problems 638

CHAPTER 13
Liability-Driven and Index-Based Strategies 643

Learning Outcomes 643
1. Introduction 643
2. Liability-Driven Investing 644
3. Interest Rate Immunization—Managing the Interest Rate Risk
   of a Single Liability 648
4. Interest Rate Immunization—Managing the Interest Rate Risk
   of Multiple Liabilities 660
   4.1. Cash Flow Matching 661
   4.2. Duration Matching 664
   4.3. Derivatives Overlay 670
   4.4. Contingent Immunization 674
5. Liability-Driven Investing—An Example of a Defined Benefit Pension Plan 675
6. Risks in Liability-Driven Investing 685
7. Bond Indexes and the Challenges of Matching a Fixed-Income
   Portfolio to an Index 689
9. Benchmark Selection 701
10. Laddered Bond Portfolios 704
11. Summary 708
  References 711
  Practice Problems 712

CHAPTER 14
Yield Curve Strategies 721

Learning Outcomes 721
1. Introduction 721
2. Foundational Concepts for Active Management of Yield Curve Strategies 722
  2.1. A Review of Yield Curve Dynamics 724
  2.2. Duration and Convexity 727
3. Major Types of Yield Curve Strategies 729
  3.1. Strategies under Assumptions of a Stable Yield Curve 730
  3.2. Strategies for Changes in Market Level, Slope, or Curvature 737
4. Formulating a Portfolio Positioning Strategy Given a Market View 747
  4.1. Duration Positioning in Anticipation of a Parallel Upward Shift in the Yield Curve 748
  4.2. Portfolio Positioning in Anticipation of a Change in Interest Rates, Direction Uncertain 751
  4.3. Performance of Duration-Neutral Bullets, Barbells, and Butterflies Given a Change in the Yield Curve 752
  4.4. Using Options 765
5. Inter-Market Curve Strategies 770
6. Comparing the Performance of Various Duration-Neutral Portfolios in Multiple Curve Environments 784
  6.1. The Baseline Portfolio 784
  6.2. The Yield Curve Scenarios 785
  6.3. Extreme Barbell vs. Laddered Portfolio 787
  6.4. Extreme Bullet 788
  6.5. A Less Extreme Barbell Portfolio vs. Laddered Portfolio 789
  6.6. Comparing the Extreme and Less Extreme Barbell Portfolios 790
7. A Framework for Evaluating Yield Curve Trades 793
8. Summary 802
  Practice Problems 804

CHAPTER 15
Fixed-Income Active Management: Credit Strategies 817

Learning Outcomes 817
1. Introduction 817
2. Investment-Grade and High-Yield Corporate Bond Portfolios 818
  2.1. Credit Risk 819
  2.2. Credit Migration Risk and Spread Risk 820
2.3. Interest Rate Risk 821
2.4. Liquidity and Trading 824
3. Credit Spreads 826
  3.1. Credit Spread Measures 826
  3.2. Excess Return 831
4. Credit Strategy Approaches 832
  4.1. The Bottom-Up Approach 832
  4.2. The Top-Down Approach 842
  4.3. Comparing the Bottom-Up and Top-Down Approaches 850
  4.4. ESG Considerations in Credit Portfolio Management 851
5. Liquidity Risk and Tail Risk in Credit Portfolios 853
  5.1. Liquidity Risk 853
  5.2. Tail Risk 857
6. International Credit Portfolios 859
  6.1. Relative Value in International Credit Portfolios 860
  6.2. Emerging Markets Credit 861
  6.3. Global Liquidity Considerations 862
  6.4. Currency Risk in Global Credit Portfolios 862
  6.5. Legal Risk 863
7. Structured Financial Instruments 863
  7.1. Mortgage-Backed Securities 864
  7.2. Asset-Backed Securities 865
  7.3. Collateralized Debt Obligations 865

Glossary 875

About the Editors 891

About the CFA Program 893

Index 895
PREFACE

We are pleased to bring you Fixed Income Analysis, which provides authoritative and up-to-date coverage of how investment professionals analyze and manage fixed-income portfolios. As with many of the other titles in the CFA Institute Investment Series, the content for this book is drawn from the official CFA Program curriculum. As such, readers can rely on the content of this book to be current, globally relevant, and practical.

The content was developed in partnership by a team of distinguished academics and practitioners, chosen for their acknowledged expertise in the field, and guided by CFA Institute. It is written specifically with the investment practitioner in mind and provides numerous examples and practice problems that reinforce the learning outcomes and demonstrate real-world applicability.

The CFA Program curriculum, from which the content of this book was drawn, is subject to a rigorous review process to assure that it is:

• Faithful to the findings of our ongoing industry practice analysis
• Valuable to members, employers, and investors
• Globally relevant
• Generalist (as opposed to specialist) in nature
• Replete with sufficient examples and practice opportunities
• Pedagogically sound

The accompanying workbook is a useful reference that provides Learning Outcome Statements, which describe exactly what readers will learn and be able to demonstrate after mastering the accompanying material. Additionally, the workbook has summary overviews and practice problems for each chapter.

We hope you will find this and other books in the CFA Institute Investment Series helpful in your efforts to grow your investment knowledge, whether you are a relatively new entrant or an experienced veteran striving to keep up to date in the ever-changing market environment. CFA Institute, as a long-term committed participant in the investment profession and a not-for-profit global membership association, is pleased to provide you with this opportunity.

THE CFA PROGRAM

If the subject matter of this book interests you, and you are not already a CFA charterholder, we hope you will consider registering for the CFA Program and starting progress toward earning the Chartered Financial Analyst designation. The CFA designation is a globally recognized standard of excellence for measuring the competence and integrity of investment professionals. To earn the CFA charter, candidates must successfully complete the CFA Program, a global
graduate-level self-study program that combines a broad curriculum with professional conduct requirements as preparation for a career as an investment professional.

Anchored by a practice-based curriculum, the CFA Program Body of Knowledge reflects the knowledge, skills, and abilities identified by professionals as essential to the investment decision-making process. This body of knowledge maintains its relevance through a regular, extensive survey of practicing CFA charterholders across the globe. The curriculum covers 10 general topic areas, ranging from equity and fixed-income analysis to portfolio management to corporate finance—all with a heavy emphasis on the application of ethics in professional practice. Known for its rigor and breadth, the CFA Program curriculum highlights principles common to every market so that professionals who earn the CFA designation have a thoroughly global investment perspective and a profound understanding of the global marketplace.
ACKNOWLEDGMENTS

Authors
We would like to thank the many distinguished authors who contributed outstanding chapters in their respective areas of expertise:

Leslie Abreo, MFE  Thomas S.Y. Ho, PhD
James F. Adams, PhD, CFA  Andrew Kalotay, PhD
Don M. Chance, PhD, CFA  Robert W. Kopprasch, PhD, CFA
Moorad Choudhry, PhD, FRM, FCSI  Sang Bin Lee, PhD
Frank J. Fabozzi, PhD, CPA, CFA  Steven V. Mann, PhD
Ioannis Georgiou, CFA  Oleg Melentyev, CFA

Christopher L. Gootkind, CFA  Donald J. Smith, PhD
Bernd Hanke, PhD, CFA  Lavone F. Whitmer, CFA
Brian J. Henderson, PhD, CFA  Stephen E. Wilcox, PhD, CFA

Reviewers
Special thanks to all the reviewers, curriculum advisors, and question writers who helped to ensure high practical relevance, technical correctness, and understandability of the material presented here.

Production
We would like to thank the many others who played a role in the conception and production of this book: the Curriculum and Learning Experience team at CFA Institute, with special thanks to the Curriculum Directors, past and present, who worked with the authors and reviewers to produce the chapters in this book; the Practice Analysis team at CFA Institute; and the Credentialing Product Marketing team at CFA Institute.
ABOUT THE CFA INSTITUTE SERIES

CFA Institute is pleased to provide you with the CFA Institute Investment Series, which covers major areas in the field of investments. We provide this series for the same reason we have been chartering investment professionals for more than 50 years: to lead the investment profession globally by promoting the highest standards of ethics, education, and professional excellence for the ultimate benefit of society.

The books in the CFA Institute Investment Series contain practical, globally relevant material. They are intended both for those contemplating entry into the extremely competitive field of investment management as well as for those seeking a means of keeping their knowledge fresh and up to date. This series was designed to be user friendly and highly relevant.

We hope you find this series helpful in your efforts to grow your investment knowledge, whether you are a relatively new entrant or an experienced veteran ethically bound to keep up to date in the ever-changing market environment. As a long-term, committed participant in the investment profession and a not-for-profit global membership association, CFA Institute is pleased to provide you with this opportunity.

THE TEXTS

*Corporate Finance: A Practical Approach* is a solid foundation for those looking to achieve lasting business growth. In today's competitive business environment, companies must find innovative ways to enable rapid and sustainable growth. This text equips readers with the foundational knowledge and tools for making smart business decisions and formulating strategies to maximize company value. It covers everything from managing relationships between stakeholders to evaluating merger and acquisition bids, as well as the companies behind them. Through extensive use of real-world examples, readers will gain critical perspective into interpreting corporate financial data, evaluating projects, and allocating funds in ways that increase corporate value. Readers will gain insights into the tools and strategies used in modern corporate financial management.

*Equity Asset Valuation* is a particularly cogent and important resource for anyone involved in estimating the value of securities and understanding security pricing. A well-informed professional knows that the common forms of equity valuation—dividend discount modeling, free cash flow modeling, price/earnings modeling, and residual income modeling—can all be reconciled with one another under certain assumptions. With a deep understanding of the underlying assumptions, the professional investor can better understand what other investors assume when calculating their valuation estimates. This text has a global orientation, including emerging markets.
International Financial Statement Analysis is designed to address the ever-increasing need for investment professionals and students to think about financial statement analysis from a global perspective. The text is a practically oriented introduction to financial statement analysis that is distinguished by its combination of a true international orientation, a structured presentation style, and abundant illustrations and tools covering concepts as they are introduced in the text. The authors cover this discipline comprehensively and with an eye to ensuring the reader’s success at all levels in the complex world of financial statement analysis.

Investments: Principles of Portfolio and Equity Analysis provides an accessible yet rigorous introduction to portfolio and equity analysis. Portfolio planning and portfolio management are presented within a context of up-to-date, global coverage of security markets, trading, and market-related concepts and products. The essentials of equity analysis and valuation are explained in detail and profusely illustrated. The book includes coverage of practitioner-important but often neglected topics, such as industry analysis. Throughout, the focus is on the practical application of key concepts with examples drawn from both emerging and developed markets. Each chapter affords the reader many opportunities to self-check his or her understanding of topics.

One of the most prominent texts over the years in the investment management industry has been Maginn and Tuttle’s Managing Investment Portfolios: A Dynamic Process. The third edition updates key concepts from the 1990 second edition. Some of the more experienced members of our community own the prior two editions and will add the third edition to their libraries. Not only does this seminal work take the concepts from the other readings and put them in a portfolio context, but it also updates the concepts of alternative investments, performance presentation standards, portfolio execution, and, very importantly, individual investor portfolio management. Focusing attention away from institutional portfolios and toward the individual investor makes this edition an important and timely work.

Quantitative Investment Analysis focuses on some key tools that are needed by today’s professional investor. In addition to classic time value of money, discounted cash flow applications, and probability material, there are two aspects that can be of value over traditional thinking. The first involves the chapters dealing with correlation and regression that ultimately figure into the formation of hypotheses for purposes of testing. This gets to a critical skill that challenges many professionals: the ability to distinguish useful information from the overwhelming quantity of available data. Second, the final chapter of Quantitative Investment Analysis covers portfolio concepts and takes the reader beyond the traditional capital asset pricing model (CAPM) type of tools and into the more practical world of multifactor models and arbitrage pricing theory.

All books in the CFA Institute Investment Series are available through all major book-sellers. All titles also are available on the Wiley Custom Select platform at http://customselect.wiley.com, where individual chapters for all the books may be mixed and matched to create custom textbooks for the classroom.
FIXED INCOME ANALYSIS
PART I

FIXED INCOME ESSENTIALS
LEARNING OUTCOMES

After completing this chapter, you will be able to do the following:

• describe basic features of a fixed-income security;
• describe content of a bond indenture;
• compare affirmative and negative covenants and identify examples of each;
• describe how legal, regulatory, and tax considerations affect the issuance and trading of fixed-income securities;
• describe how cash flows of fixed-income securities are structured;
• describe contingency provisions affecting the timing and/or nature of cash flows of fixed-income securities and identify whether such provisions benefit the borrower or the lender.

1. INTRODUCTION

Judged by total market value, fixed-income securities constitute the most prevalent means of raising capital globally. A fixed-income security is an instrument that allows governments, companies, and other types of issuers to borrow money from investors. Any borrowing of money is debt. The promised payments on fixed-income securities are, in general, contractual (legal) obligations of the issuer to the investor. For companies, fixed-income securities contrast to common shares in not having ownership rights. Payments of interest and repayment of principal (amount borrowed) are a prior claim on the company's earnings and assets compared with the claim of common shareholders. Thus, a company's fixed-income securities have, in theory, lower risk than that company's common shares.

In portfolio management, fixed-income securities fulfill several important roles. They are a prime means by which investors—individual and institutional—can prepare to fund,
with some degree of safety, known future obligations such as tuition payments or pension obligations. The correlations of fixed-income securities with common shares vary; but, adding fixed-income securities to portfolios including common shares is usually an effective way of obtaining diversification benefits.

Among the questions this chapter addresses are the following:

• What set of features defines a fixed-income security, and how do these features determine the scheduled cash flows?
• What are the legal, regulatory, and tax considerations associated with a fixed-income security, and why are these considerations important for investors?
• What are the common structures regarding the payment of interest and repayment of principal?
• What types of provisions may affect the disposal or redemption of fixed-income securities?

Embracing on the study of fixed-income securities, please note that the terms “fixed-income securities,” “debt securities,” and “bonds” are often used interchangeably by experts and non-experts alike. We will also follow this convention, and where any nuance of meaning is intended, it will be made clear.1

The remainder of this chapter is organized as follows. Section 2 describes, in broad terms, what an investor needs to know when investing in fixed-income securities. Section 3 covers the nature of the contract between the issuer and the bondholders as well as the legal, regulatory, and tax framework within which this contract exists. Section 4 presents the principal and interest payment structures that characterize fixed-income securities. Section 5 discusses the contingency provisions that affect the timing and/or nature of a bond’s cash flows. The final section provides a conclusion and summary of the chapter.

2. OVERVIEW OF A FIXED-INCOME SECURITY

A bond is a contractual agreement between the issuer and the bondholders. There are three important elements that an investor needs to know about when investing in a bond:

• The bond’s features, including the issuer, maturity, par value, coupon rate and frequency, and currency denomination. These features determine the bond’s scheduled cash flows and, therefore, are key determinants of the investor’s expected and actual return.
• The legal, regulatory, and tax considerations that apply to the contractual agreement between the issuer and the bondholders.
• The contingency provisions that may affect the bond’s scheduled cash flows. These contingency provisions are options; they give the issuer or the bondholders certain rights affecting the bond’s disposal or redemption.

This section describes a bond’s basic features and introduces yield measures. The legal, regulatory, and tax considerations and contingency provisions are discussed in Sections 3 and 5, respectively.

1 Note that the term “fixed income” is not to be understood literally: Some fixed-income securities have interest payments that change over time. Some experts include preference shares as a type of fixed-income security, but none view them as a type of bond. Finally, in some contexts, bonds refer to the longer-maturity form of debt securities in contrast to money market securities.
2.1. Basic Features of a Bond

All bonds, whether they are “traditional” bonds or asset-backed securities, are characterized by the same basic features. Asset-backed securities (ABS) are created via a process called securitization, which involves moving assets from the owner of the assets into a special legal entity. This special legal entity then uses the securitized assets as guarantees to back (secure) a bond issue, leading to the creation of ABS. Assets that are typically used to create ABS include residential and commercial mortgage loans (mortgages), automobile (auto) loans, student loans, bank loans, and credit card debt, among others. Many elements discussed in this chapter apply to both traditional bonds and ABS. Considerations specific to ABS are discussed in the introduction to asset-backed securities chapter.

2.1.1. Issuer

Many entities issue bonds: private individuals, such as the musician David Bowie; national governments, such as Singapore or Italy; and companies, such as BP, General Electric, or Tata Group.

Bond issuers are classified into categories based on the similarities of these issuers and their characteristics. Major types of issuers include the following:

- Supranational organizations, such as the World Bank or the European Investment Bank;
- Sovereign (national) governments, such as the United States or Japan;
- Non-sovereign (local) governments, such as the state of Minnesota in the United States, the region of Catalonia in Spain, or the city of Edmonton in Canada;
- Quasi-government entities (i.e., agencies that are owned or sponsored by governments), such as postal services in many countries—for example, Correios in Brazil, La Poste in France, or Pos in Indonesia;
- Companies (i.e., corporate issuers). A distinction is often made between financial issuers (e.g., banks and insurance companies) and non-financial issuers; and
- Special legal entities that securitize assets to create ABS that are then sold to investors.

Market participants often classify fixed-income markets by the type of issuer, which leads to the identification of three bond market sectors: the government and government-related sector (i.e., the first four types of issuers listed above), the corporate sector (the fifth type listed above), and the structured finance sector (the last type listed above).

Bondholders are exposed to credit risk—that is, the risk of loss resulting from the issuer failing to make full and timely payments of interest and/or repayments of principal. Credit risk is inherent to all debt investments. Bond markets are sometimes classified into sectors based on the issuer’s creditworthiness as judged by credit rating agencies. One major distinction is between investment-grade and non-investment-grade bonds, also called high-yield or speculative bonds.2 Although a variety of considerations enter into distinguishing the two sectors, the promised payments of investment-grade bonds are perceived as less risky than those of non-investment-grade bonds because of profitability and liquidity considerations. Some regulated financial intermediaries, such as banks and life insurance companies, may face explicit or implicit limitations of holdings of non-investment-grade bonds. The investment policy statements of some investors may also include constraints or limits on such holdings. From

---

2The three largest credit rating agencies are Moody’s Investors Service, Standard & Poor’s, and Fitch Ratings. Bonds rated Baa3 or higher by Moody’s and BBB- or higher by Standard & Poor’s and Fitch are considered investment grade.
the issuer’s perspective, an investment-grade credit rating generally allows easier access to bond markets and at lower interest rates than does a non-investment-grade credit rating.3

2.1.2. Maturity
The maturity date of a bond refers to the date when the issuer is obligated to redeem the bond by paying the outstanding principal amount. The tenor is the time remaining until the bond’s maturity date. The tenor is an important consideration in the analysis of a bond. It indicates the period over which the bondholder can expect to receive the interest payments and the length of time until the principal is repaid in full.

Maturities typically range from overnight to 30 years or longer. Fixed-income securities with maturities at issuance (original maturity) of one year or less are known as money market securities. Issuers of money market securities include governments and companies. Commercial paper and certificates of deposit are examples of money market securities. Fixed-income securities with original maturities that are longer than one year are called capital market securities. Although very rare, perpetual bonds, such as the consols issued by the sovereign government in the United Kingdom, have no stated maturity date.

2.1.3. Par Value
The principal amount, principal value, or simply principal of a bond is the amount that the issuer agrees to repay the bondholders on the maturity date. This amount is also referred to as the par value, or simply par, face value, nominal value, redemption value, or maturity value. Bonds can have any par value.

In practice, bond prices are quoted as a percentage of their par value. For example, assume that a bond’s par value is $1,000. A quote of 95 means that the bond’s price is $950 (95% × $1,000). When the bond is priced at 100% of par, the bond is said to be trading at par. If the bond’s price is below 100% of par, such as in the previous example, the bond is trading at a discount. Alternatively, if the bond’s price is above 100% of par, the bond is trading at a premium.

2.1.4. Coupon Rate and Frequency
The coupon rate or nominal rate of a bond is the interest rate that the issuer agrees to pay each year until the maturity date. The annual amount of interest payments made is called the coupon. A bond’s coupon is determined by multiplying its coupon rate by its par value. For example, a bond with a coupon rate of 6% and a par value of $1,000 will pay annual interest of $60 (6% × $1,000).

Coupon payments may be made annually, such as those for German government bonds or Bunds. Many bonds, such as government and corporate bonds issued in the United States or government gilts issued in the United Kingdom, pay interest semi-annually. Some bonds make quarterly or monthly interest payments. The acronyms QUIBS (quarterly interest bonds) and QUIIDS (quarterly income debt securities) are used by Morgan Stanley and Goldman Sachs, respectively, for bonds that make quarterly interest payments. Many mortgage-backed securities (MBS), which are ABS backed by residential or commercial mortgages, pay interest monthly to match the cash flows of the mortgages backing these MBS. If a bond has a coupon rate of 6% and a par value of $1,000, the periodic interest payments will be $60 if coupon payments are made annually, $30 if they are made semi-annually, $15 if they are made quarterly, and $5 if they are made monthly.

A plain vanilla bond or conventional bond pays a fixed rate of interest. In this case, the coupon payment does not change during the bond’s life. However, there are bonds that pay

3Several other distinctions among credit ratings are made. They are discussed in depth in Chapter 6, “Fundamentals of Credit Analysis.”
